SUMMARY

Data Analyst with 2+ years of experience cleaning messy datasets, writing **SQL & Python** workflows, building **Power BI & Tableau dashboards**, & preparing **analysis-ready datasets** for reporting & research teams. Experienced in **Excel, SPSS, R, data validation, KPI reporting**, and **dashboard automation** across research, product, and business datasets. Strong at finding **data quality issues**, reducing repeated manual reporting work, & explaining insights clearly to both technical & non-technical teams.

SKILLS

Data Analysis: SQL, Python, R, Excel, SPSS, Statistical Analysis, Data Cleaning, Data Validation, Missing Value Handling, Outlier Review, Trend Analysis, Reconciliation, KPI Analysis

SQL & Databases: SQL Joins, Aggregations, Filtering, Subqueries, Window Functions, MySQL, Snowflake, MongoDB

Business Intelligence & Reporting: Power BI, Tableau, DAX, Power Query, Dashboard Design, KPI Reporting, Stakeholder Reports, Visual Summaries, Data Storytelling

AI Tools: ChatGPT, Claude, Gemini, GitHub Copilot, Perplexity, NotebookLM

Data Preparation & Automation: ETL Workflows, Data Transformation, CSV Processing, Structured Datasets, Repeatable Reporting Workflows, Quality Checks

Business Analysis: Requirements Gathering, Process Documentation, Reporting Support, Process Improvement, Stakeholder Communication

Tools & Platforms: Git, GitHub, Jupyter Notebook, Streamlit, Alteryx, REST APIs, VS Code

Cloud & Development Tools: AWS, Docker, Kubernetes

Machine Learning: Feature Engineering, Model Evaluation, Classification, Regression, Recommendation Systems

EXPERIENCE

Data Analyst - Indiana University Bloomington

Oct '25 — Present
Bloomington, United States

- Research data was spread across messy experiment files, so I built a **centralized data system** that reduced manual lookup time from several minutes to a few seconds.
- Raw CSV files needed repeated cleanup, so I created **Python-based ETL workflows** to prepare cleaner datasets before researchers used them for analysis.
- Data errors were hard to catch manually, so I added **quality checks** for missing values, inconsistent fields, and formatting issues.
- Researchers needed easier SPSS-ready files, so I built a **variable selection workflow** for clean CSV exports used in **SPSS** and Excel.
- The process was not easy to repeat, so I documented **data rules, field logic, and export steps** for consistent use across experiments.

AI & ML Intern - Kintsugi Global, Inc.

Jul '25 — Dec '25
Redondo Beach, California, United States

- Model results had ranking and scoring issues, so I reviewed structured datasets with **Python and SQL** to find unstable patterns before release.
- Some outputs were difficult to explain, so I analyzed **failure cases and test groups** to show where the scoring logic needed improvement.
- Ranking results varied across samples, so I refined **scoring logic** and improved ranking stability by about **12–15%**.
- Model tests were inconsistent, so I standardized the **training and validation workflow**, reducing model variance by approximately **18%**.
- Findings were not easy for everyone to track, so I documented **data issues, logic changes, and results**, helping the team complete iterations about **25% faster**.

Data Analyst - Project 990

Sep '24 — Jun '25
Bloomington, IN, United States

- Source files were stored in different formats and needed repeated cleanup, so I built a **Unified Data Pipeline** that combined multiple files into one clean **Reporting Dataset**, reducing preprocessing time by approximately **30%**.
- Raw datasets had **Missing Values, Duplicate Records, Outliers, And Formatting Issues**, so I cleaned and transformed the data before analysis, improving the reliability of reports and dashboards.
- Stakeholders needed both detailed and high-level views of the data, so I reviewed records at the **Transaction Level And Summary Level**, helping identify patterns, errors, and changes in key metrics.
- Reporting was taking too much manual review, so I created **Power BI-Style Dashboards** that helped stakeholders compare trends, review results, and make faster decisions without checking raw files manually.
- The reporting process needed to be repeatable, so I documented **Data Definitions, Assumptions, And Pipeline Logic**, making the workflow easier to review, reuse, and improve later.

Data Analyst - Hudl

Jan '24 — Jul '24
Mumbai, India

- Reviewed **performance datasets** using **Excel, SQL, and Python** to find missing data, inconsistent metrics, and reporting gaps before results were shared.
- Automated recurring **analysis reports**, reducing manual reporting work by approximately **40%** and helping analysts review results faster.
- Standardized **performance metrics** and built clear **summary reports**, making results easier to compare across datasets and reporting periods.

AI Engineer - Verzeo

Apr '23 — Oct '23
Bengaluru, India

- Cleaned and prepared **structured datasets** for classification and regression models, improving input quality before training.
- Built and compared **machine learning models** using **precision, recall, and error patterns** instead of relying only on accuracy.
- Identified **data quality issues** in training data and adjusted preprocessing steps to improve model consistency.
- Documented **preprocessing, testing, and evaluation workflows** so the process could be repeated clearly by the team.
- Created **model comparison summaries** to support better technical decision-making.

PROJECTS

Customer Churn Analysis & Risk Dashboard (SQL, Python, Power BI, DAX)

- Built a **customer churn analysis system** using **SQL, Python, & Power BI** to identify users most likely to leave and review retention risk without checking raw files.
- Created an **analysis-ready dataset of 6,000+ users and 32 features** by joining customer, activity, and behavior data into one clean reporting structure.
- Identified a key risk pattern: **40% churn among early users vs. under 10% after two years**, showing onboarding as the biggest drop-off point.

Sales Performance & Revenue Dashboard (Power BI, Excel, Data Transformation)

- Built a **sales and revenue dashboard** to help stakeholders track performance without preparing weekly Excel reports manually.
- Processed **23K+ transaction records** and standardized sales, product, pricing, and revenue fields for consistent reporting.
- Analyzed **month-over-month and year-over-year trends** to explain revenue changes tied to pricing, volume, and product mix.

EDUCATION

MS in Computer Science, Indiana University Bloomington (GPA: 3.75/4)

Aug '24 — May '26
Bloomington, IN, United States

- Relevant coursework :** Software Engineering, Applied Machine Learning, Advanced Database Technology, Information Visualization, Applied Algorithms, Computer Networks, Fundamentals Of Speech Process

Bachelor in Information Technology, University Of Mumbai (GPA: 3.81/4)

Aug '19 — Jun '23
Mumbai, India

CERTIFICATIONS

Indiana University - GenAI 101 Microcredential

Udemy - Web Development, Data Science, Python, Figma Bootcamp
