SUMMARY

AI Product Manager with 4+ years of experience across enterprise AI, product management, and ML engineering, specializing in GenAI, RAG, agentic AI, MLOps, and product strategy. Proven in roadmaps, PRDs, customer discovery, GTM, and cross functional delivery, including 18% higher Agent Bricks adoption, 8+ production AI workflows, and 15% better GenAI release quality. Strong track record translating customer and business needs into scalable AI products while balancing model quality, latency, governance, and unit economics. Technical expertise includes Python, SQL, MLflow, XGBoost, AWS, MCP, and Unity Catalog.

EXPERIENCE

Databricks

Jan 2026 – Present

AI Product Manager

- Increased Agent Bricks adoption by **18% across 20+ enterprise engagements** by owning **product strategy, PRDs, customer discovery, and roadmap prioritization** for RAG, agent orchestration, evals, and governance.
- Expanded governed AI into **8+ production workflows** by defining user journeys, requirements, and acceptance criteria for Knowledge Assistant, Supervisor Agent, MCP integrations, and Unity Catalog controls.
- Improved **GenAI** release quality by **15%** by establishing **MLflow evals, groundedness, relevance, hallucination, and human feedback KPIs**, turning evaluation failures into prioritized model and retrieval improvements.
- Reduced **AI response latency toward sub 3 second targets** by driving trade-offs across **model selection, context size, token usage, retrieval quality, and inference cost**, improving product responsiveness and unit economics.
- Led **engineering, applied AI, design, sales, and GTM through launch and customer expansion**, aligning roadmap scope, success metrics, and field feedback to shorten pilot to production cycles and increase enterprise use case adoption.

Informative Web Solutions

Oct 2022 – Jul 2024

Product Manager

- Accelerated **feature delivery cycle by 22%** by owning the **product roadmap, backlog prioritization, user stories, and Agile sprint planning** in Jira across engineering, design, and QA.
- Optimized **checkout and onboarding completion by 18%** through **customer discovery, product analytics, A/B testing, journey mapping, and Figma prototypes** that addressed key funnel drop offs.
- Directed **10+ client product initiatives** across web, mobile, CRM, and e-commerce, driving the **product lifecycle** from discovery and requirements through launch and post release optimization.
- Reduced **post release defects by 20%** by strengthening **acceptance criteria, UAT, stakeholder management, and release readiness reviews** with engineering, QA, and client teams.
- Increased **repeat feature adoption by 16%** by combining **usage data, customer feedback, support trends, and go-to-market or release management** to prioritize high value product enhancements.

Infinite Infolab

Feb 2021 – Sept 2022

Machine Learning Engineer

- Improved prediction accuracy by 14%** by developing **classification and regression models** with Python, scikit learn, XGBoost, Pandas, and feature engineering across structured client datasets.
- Optimized **model training time by 25%** by optimizing **feature selection, hyperparameter tuning, cross validation, and MLflow experiment tracking**, improving reproducibility across model iterations.
- Deployed **ML models through Flask REST APIs and Docker**, integrating inference into client applications and supporting **10K+ monthly prediction requests**.
- Automated data preparation and retraining workflows with **Python, SQL, Airflow, and AWS**, processing **500K+ records per cycle** and eliminating **15+ hours of manual effort monthly**.

SKILLS

Product Management: Product Strategy, Product Roadmap, PRDs, Customer Discovery, Backlog Prioritization, User Stories, Product Analytics, A/B Testing, Product Lifecycle, Stakeholder Management, Go-to-Market, Agile, Jira, Figma

AI / GenAI: RAG, Agentic AI, Agent Orchestration, MCP, AI Evaluation, AI Governance, MLflow, Groundedness, Hallucination Evaluation, Human-in-the-Loop, Model Selection, Retrieval Optimization, Token/Inference Cost Optimization

Machine Learning: Python, scikit learn, XGBoost, Pandas, Classification, Regression, Feature Engineering, Hyperparameter Tuning, Cross Validation, Model Training, Model Deployment, Model Retraining, Real Time Inference

MLOps & Cloud: SQL, Flask, REST APIs, Docker, Apache Airflow, AWS, MLflow, Unity Catalog, MLOps

Cross Functional Delivery: Engineering Collaboration, Applied AI Collaboration, Design Collaboration, Sales Collaboration, GTM Collaboration, QA Collaboration, Client Stakeholder Management, Sprint Planning, Launch Management, Customer Expansion

EDUCATION

Indiana University Bloomington | Bloomington, IN

Aug 2024 – May 2026

Master of Science, Computer Science
